DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/21/2006 has been entered.

The rejection under section 11, second paragraph is withdrawn in view of the amendments, and applicant's remarks regarding the reaction of the carbamoyl fluoride to produce the corresponding isocyanate.

The following new grounds of rejection are now entered:

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-6, 9-18 rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The ration of hydrofluoric acid to carbamoyl fluoride is critical or essential to the practice of the invention, but not included in the claim(s) is not

Art Unit: 1621

enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

The specification indicates that, in the case of an addition to a solvent heel, the addition must be carried out so as to control the ratio of the hydrofluoric acid present in the reaction medium, in this specific case including that added, more exactly in equilibrium with the carbamoyl fluoride, to the substrate. In other words, the ratio of the hydrofluoric acid [the free hydrofluoric acid and that added to an isocyanate functional group (that is to say, in the form of carbamoyl fluoride)] and the isocyanate functional groups, real or masked in the carbamoyl fluoride form, is advantageously at most equal to 5, preferably at most equal to 0.3, more preferably at most equal to 0.1. This condition implies a relatively slow addition of the carbamoyl fluoride.

However, the indicated ratio is missing from the rejected claims.

Claim 7 is objected to for dependence on one or more rejected claims and therefore, would be allowable if rewritten in independent form, including all limitations of intervening claims.

Claims 19-24 are allowed.
